

Using the Wetta Sales Catalogue

A plain-language, step-by-step guide to browsing products, checking stock, and sending WhatsApp quotations to customers — on your phone or computer.

1

GETTING STARTED

What this app is for

The Sales Catalogue is where you look up Wetta products, check whether an item is currently in stock, and put together a quotation to send a customer over WhatsApp — all from your phone while you're out meeting clients, or from a computer at the counter.

You'll find it at:

wettabathfittings.com/catalog

i

Bookmark it

Save this address to your phone's home screen (see the next section) so it opens like a normal app, with no need to type the address every time.

Add the catalogue to your home screen

The catalogue works like a normal app once it's installed — it gets its own icon, opens full-screen with no browser address bar, and loads faster. This takes under a minute.

A ANDROID (CHROME)

1. Open **wettabathfittings.com/catalog** in Chrome.
2. Tap the **⋮** menu in the top-right corner.
3. Tap **Install app** (or **Add to Home screen**).
4. Confirm by tapping **Install**.

IOS IPHONE (SAFARI)

1. Open **wettabathfittings.com/catalog** in Safari.
2. Tap the **Share** icon (square with an arrow) at the bottom.
3. Scroll down and tap **Add to Home Screen**.
4. Tap **Add** in the top-right corner.

i

Already signed in stays signed in

Once you unlock the catalogue once on your device, the app icon will open straight to the product list next time — no need to enter the password every time you open it.

Unlocking the catalogue

Because the catalogue contains company pricing, your administrator may set a shared password for it. If one is set, you'll see a lock screen when you open the app.

The lock screen — enter the password your administrator shared with you and tap Unlock Catalogue.

Don't have the password?

Ask your administrator — it's set and changed from the admin console, not by sales staff. If it's ever changed, you'll simply need to unlock the app again with the new one.

Finding what you need

Once unlocked, you'll land on the full product list. Use the panel on the left (or, on your phone, the search box and category list at the top) to narrow things down:

- **Search box** — type an item code or part of the product name.
- **Categories** — tap a category (e.g. Showers, Health Faucets) to see only that group, or **All Products** to reset.
- **Refresh icon** — pulls the very latest prices and stock from the office in case anything changed since you opened the app.

The catalogue home screen — categories and search on the left, products on the right.

Reading the stock badge

Every product shows a coloured status instead of an exact stock number — this keeps the number of units confidential while still telling you everything you need for a conversation with a customer.

IN STOCK

Good availability — safe to promise quick delivery.

LOW STOCK

Limited units remain — confirm quantity with the office before committing to a large order.

OUT OF STOCK

None available right now — let the customer know there may be a delay, or suggest an alternative.

**The cutoffs can change**

What counts as "Low Stock" is a number set by your administrator and can be adjusted at any time — you'll always see the current, correct status, you just won't see the raw count behind it.

Product details & larger photos

Tap anywhere on a product card to open its full details — category, suggested MRP, and stock status all in one place.

Tap the product photo inside this window to view it larger — useful for showing a customer real detail.

Adding items to your quote

Tap **Add to Cart** on any product — the card switches to a quantity stepper so you can adjust how many units the customer wants. A floating button appears once you've added something, showing your running item count.

Tap the floating Quotation Cart button any time to review or send your quote.

Adding customer details and a note

Inside the cart, scroll down to fill in the customer's name and (optionally) their WhatsApp number, choose which brand the quote is for, and add any remarks — a requested discount, a delivery date, anything worth flagging to the office.

The screenshot displays the Wetta app interface. On the left is a sidebar with the Wetta logo, a home button, a search bar, and a categories list (All Products, Health Faucets, Showers, Accessories, Concealed, Sink). The main area shows a grid of product cards, each with an icon, category, name, status (e.g., IN STOCK, LOW STOCK), suggested MRP, and an 'Add to Cart' button. A 'QUOTATION BUILDER' overlay is on the right. It shows 'SELECTED ITEMS (1)' with a 'Premium Health Faucet Chrome Finish' (HF-101) for ₹850.00. Below this is the 'ESTIMATED TOTAL: ₹850.00'. The 'CLIENT DETAILS & QUOTATION NOTE' section includes fields for 'CLIENT NAME' (Ramesh Traders), 'CLIENT WHATSAPP PHONE (OPTIONAL)' (9847012345), and a 'BRAND' toggle (WETTA selected, WATERLIFE available). There is a 'REMARKS / SPECIAL NOTES' field with the text 'E.G., Requesting 10% discount on health faucets...'. At the bottom are buttons for 'SEND TO ADMIN WHATSAPP', 'SEND TO CLIENT WHATSAPP', 'COPY TEXT', and 'SHARE CUSTOM'.

Client name, phone, brand (Wetta or Waterlife), and remarks — all included automatically in the quotation message.

Brand matters

Always double-check the Brand toggle before sending — it's included at the top of the quotation message so the office knows which product line the order is for.

Getting the quote to the right person

At the bottom of the cart you have four ways to hand off the quotation:

- **Send to Admin WhatsApp** — goes straight to the office number on file, for internal confirmation or order processing.
- **Send to Client WhatsApp** — appears once you've entered the customer's phone number; opens WhatsApp with the quote ready to send to them directly.
- **Copy Text** — copies the full formatted quotation to your clipboard, to paste anywhere you like.
- **Share Custom** — send to any other WhatsApp number, for example a distributor or a colleague.

On your phone: swipe to send

On mobile, the main send button is a sliding control — drag it all the way to the right to confirm and send. This avoids accidentally firing off a quotation with a stray tap.

10 GOOD PRACTICES

A few things worth knowing

- **Product photos are for viewing, not saving.** Right-click, drag, and long-press saving are switched off on product images — please don't try to screenshot and forward photos outside of a genuine customer conversation.
- **Refresh before a big quote.** If you've had the app open for a while, tap the refresh icon first to make sure prices and stock are current.
- **One quotation, one customer.** Start a fresh cart for each customer rather than editing an old one, so quotation numbers and totals stay easy to trace.

11 TROUBLESHOOTING

Common questions

THE PASSWORD DOESN'T WORK

Passwords are case-sensitive and can be changed by an administrator at any time. Confirm the current one with your admin.

A PRODUCT I NEED ISN'T LISTED

The catalogue only shows what's been entered by the office. Ask your administrator to add it via the admin console.

STOCK STATUS LOOKS WRONG

Tap the refresh icon in the sidebar — status updates as soon as the office changes stock counts, but your screen needs a refresh to see it.

WHATSAPP OPENED WITH THE WRONG NUMBER

The "Send to Admin" number is set centrally by your administrator in Config Settings — let them know if it needs updating.

I WAS LOGGED OUT UNEXPECTEDLY

This happens if the administrator changes the catalogue password — simply enter the new one to get back in.
